FS-1030D

MONOCHROME A4 DESKTOP PRINTER

ECOSYS™ The ECOSYS technology is based on extremely durable components. The drum, developer and fuser of the FS-1030D are designed to last for 100,000 pages. As toner is the only consumable required, ECOSYS printers operate with the lowest cost per page in their class, and they are particularly environmentally friendly. Thanks to their modular system and flexible paper options all ECOSYS printers can be configured to meet your exact requirements.

System platform:

The FS-1030D offers USB and parallel connectivity as standard and delivers optional network connectivity and straightforward system administration. Kyocera's single platform technology means that the same driver can be used for every Kyocera PCL/PostScript print device on the network: from single-user desktop printers to high-end multifunctional systems. Only Kyocera offers this effortless combination of IT sophistication and high-performance paper handling expertise.

PRESCRIBE IIe:

With the Kyocera page design and control language PRESCRIBE IIe, even complex graphics, logos and forms (even multipart forms) can be created independently of the system and saved and updated in the printer. They are only accessed as required, relieving the load on the network.

KM-NET for Client/KM-NET Viewer:

The settings of all printers on the network can be checked visually and amended from any Windows PC. KM-NET for Client allows easy setup and checking of the printer's status via parallel, USB or network connections. KM-Net Viewer is an advanced printer management software tool using the standardized protocol SNMP.
